Dear Prison University Project,

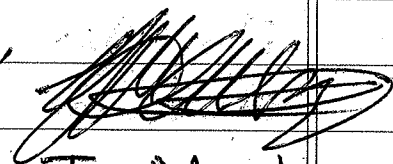

* Please do measure that the food is all Halal and Kosher to cover the entire population of the new

Our unit does not provide us with enough protein in our diet. Thank you very much for sending us a care package, esp. the fish, beef jerky & Trail mix. But ^{to be} honest, one day is not enough ^{food}. It would be really appreciated if you could send a package to us everyday (concentrated on protein products above) during this COVID 19 crisis, when the economy is locked down and our families are "already struggling" to send us food from their limited paychecks. Most importantly, I noticed you said that you are thinking about us on the now. Thank you. But actions speak louder than words. The elderly & health related inmates ~~are~~ are being thought of. That is important. But, its also equally important that you advocate to Governor Newsom about some kind of "parole (release to society)" policy for eligible inmates such as myself, who are committed to rehabilitation through education & mental health psychological testing. My parents are 71 & 78 respectively. My brother is disabled. At a time like

this, I could be of great assistance to them. Plus our housing space does not maintain the 6 feet. Governor Newsom stated that his biggest concern for us getting out was "homelessness". If we are able to establish these ties, and pass other psychological/educational testing, we could be released to society where we could make positive societal contributions & volunteering.

Please post my letter anywhere and everywhere you see fit, so that the proper leaders of California (and the world) are aware that prisons are being considered the breeding grounds for COVID19. Write me back. Take care of your health.

Sincerely,

I. Murtagh
